MILD HYBRID (MHEV)

A small electric motor that helps improve efficiency versus a conventional internal combustion engine.

Mild Hybrid vehicles have two sources of power that work together – a conventional engine and a battery -driven electric motor. The electric motor does not power the car. It simply assists it.

Kuga mHEV has an auxiliary electric motor and a 48v battery that further improve fuel economy up to 56.5 mpg and lower CO₂**. They also assist with acceleration transferring back the energy.
